1 Introduction

*This document is configured to showcase the **PDF Export Watermark** feature. After selecting **Operations > Export to PDF,** each page is watermarked with an image. Rules for document watermarks can also be specified via a plugin. This plugin lets users force watermarks based on a custom field value like "Restricted documents".*

1.1 Purpose

A Product Specification is a complete description of the behavior of the product to be developed. It includes a set of User Stories that describe all the interactions that users will

have with the software. In addition to User Stories, this document also contains Requirements.

1.2 Scope

The document describes a fictitious online eBook lending library with an optional online eBook sales component. The focus is on simplicity rather than depth and completeness, so that you may more easily understand the Document's features.

Not all the User Stories need to be implemented in the 1.0 release. The release planning is managed separately. See Planning.

Specifications:

- Administration Specification
- Catalog Specification

2 Overall Description

This system provides an online portal analogous to a public library where registered patrons can "borrow" books. The main difference being, that the books in the library catalog are all in electronic formats that incorporate Digital Rights Management (DRM). This lets the system “lend” an allowed number of copies to registered users. In addition, when a book has the proper rights, the E-Library can sell patrons a license for a personal copy of the electronic book that they can retain permanently.

2.1 Abbreviations and Terms

TERM	DEFINITION
Cart	i.e. “Shopping Cart” – A collection of one or more eBooks that a patron has marked for purchase during the current session.
Catalog	The database of eBooks available for loan and possibly for sale.
Check Out	The act of “borrowing” an eBook from the library. The term is *not* used in reference to the process of paying for a purchased eBook. (See Purchase.)
Check In	The act of “returning” a previously “borrowed” (checked out) eBook.
DRM	Digital Rights Management
eBook	An electronic book or other publication lent or sold by the E-Library system.
ISBN	International Standard Book Number
LC	Library of Congress
Loan	See *Lend*.

TERM	DEFINITION
Lend	The process of flagging an eBook so the appropriate DRM understands that one of the allowable number of “copies” has been allocated to a patron for the allowable lending period.
Patron	A user of the E-Library portal.
Purchase	The process by which library patrons purchase a DRM license for a personal copy of an eBook. (Also refers to the action of a user navigating through the process of purchasing the eBooks listed in their Cart.)
Store	An area of the portal that lists a subset of the library’s eBooks. (eBooks that users can purchase a personal copy license for.)

3 Product Backlog

3.1 Basics

EL-198 - Basic Product Behavior
This Epic sums up the basic behavior of the product. **[**Should Have, In Progress, Version 1.0 (2017-03-31) **]**

EL-105 - Login Page
When users want to access the Elibrary portal they need to login and provide valid credentials. **[**Verified, Must Have, ~~Iteration 0 (2016-12-31)~~, ~~Version 0.9b (2016-12-31)~~ **]**

EL-107 - User Statistics
Users should easily access information on what books they have borrowed. **[**Verified, Must Have, ~~Iteration 0 (2016-12-31)~~, ~~Version 0.9b (2016-12-31)~~ **]**

3.2 Book Information

EL-199 - Books
This Epic describes the Book object. **[**Should Have, In Progress, Version 1.0 (2017-03-31) **]**

EL-116 - Basic Book Details
Users want to view basic information about the book:

- Title
- Author
- Published date
- ISBN

[Verified, Must Have, ~~Iteration 0 (2016-12-31)~~, ~~Version 0.9b (2016-12-31)~~ **]**

EL-118 - Detailed book information
Users want to view additional information about a book:

- Number of pages
- Who illustrated the book
- Price

[✔ Verified, ❗ Must Have, ~~Iteration 0 (2016-12-31)~~, ~~Version 0.9b (2016-12-31)~~ **]**

3.3 Author Information

EL-200 - Author
This Epic describes the Author object. **[**❗ Should Have, ⏳ In Progress, Version 1.1 **]**

EL-119 - Basic Author Details
When viewing a book's details, users also want to get information about the author or authors. The details should include:

- Full name
- Date of birth
- Date of death (If deceased)
- A list of other books written by them. (If more than 5, the 6th entry can be a link to a complete bibliography page.)

[✔ Verified, ❗ Must Have, ~~Iteration 0 (2016-12-31)~~, ~~Version 0.9b (2016-12-31)~~ **]**

3.4 Searches

EL-201 - Searches
This Epic describes all relevant information for the Search feature. **[**❗ Should Have, ⏳ In Progress, Version 1.0 (2017-03-31) **]**

EL-108 - Search for a book by book name
Users typicaly search for the book by name. This feature should be accesssible all the times. **[**✔ Verified, ❗ Must Have, ~~Iteration 0 (2016-12-31)~~, ~~Version 0.9b (2016-12-31)~~ **]**

EL-115 - Search for an author by author name
Users want to be able to search for authors by name. **[**✔ Verified, ❗ Must Have, ~~Iteration 0 (2016-12-31)~~, ~~Version 0.9b (2016-12-31)~~ **]**

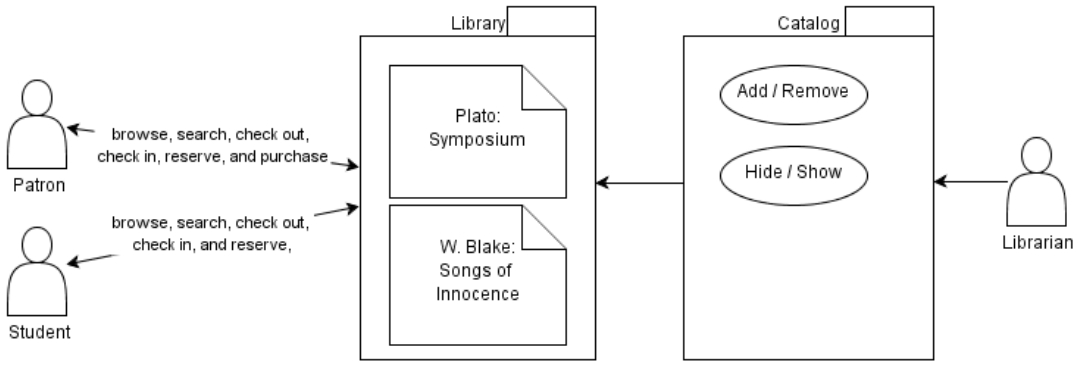

EL-133 - List of newly added books.
The system must provide an easy way to list newly added books. It can return a listing of the 10 - 50 (configurable) most recently added eBooks. **[**✔ Verified, ❗ Must Have, ~~Iteration 0 (2016-12-31)~~, ~~Version 0.9b (2016-12-31)~~ **]**

4 Administration

4.1 User Roles

The system must provide for the following types of user accounts:

ACCOUNT TYPE	PERMISSIONS
Administrator	Can access any component or area of the system including the accounts of other users.
Librarian	Can access the catalog management features of the system.
Patron	Can access the general library features, including browsing, searching, check out, check in, reserve, and purchase.
Student	Same as a Patron, except students can not access Purchase features.

5 Requirements

5.1 Performance Requirements

If there are performance requirements for the product under various circumstances, state them here and explain their rationale.This helps developers understand the intended performance targets and make design choices accordingly. Specify the timing relationships for real time systems. Make these requirements as specific as possible. You may need to state performance requirements for individual functional requirements or features.

5.2 Safety Requirements

Specify any requirements concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must be taken, as well as actions that must be prevented. Refer to any external policies or regulations that

describe safety issues that could affect the product's design or use. Define any safety certifications that must be satisfied.

5.3 Security Requirements

Specify any requirements regarding security or privacy issues surrounding the use of the product or the protection of data used and created by the product. Define any user identity authentication requirements. Refer to any external policies or regulations containing security issues that affect the product. Define any security or privacy certifications that must be satisfied.

5.4 Software Quality Attributes

Specify any additional quality characteristics for the product that will be important to either customers or developers. Some to consider are: adaptability, availability, correctness, flexibility, interoperability, maintainability, portability, reliability, reusability, robustness, testability, and usability. Write these to be specific, quantitative, and verifiable when possible. At the very least, clarify the relative preferences for various attributes, such as ease of use over ease of learning.

5.5 Other Requirements

Define any other requirements not covered elsewhere in the specification. This might include database requirements, internationalization requirements, legal requirements, reuse objectives for the project, and so on. Add any new sections that are pertinent to the project.

6 Appendix A: Terminology/Glossary/Definitions list

Define all the terms necessary to properly interpret this document, including acronyms and abbreviations. You may wish to build a separate glossary that spans multiple projects or the entire organization, and just include terms specific to a single project in each document.

7 Appendix B: Analysis Models

Optionally, include any pertinent analysis models, such as data flow diagrams, class diagrams, state-transition diagrams, or entity-relationship diagrams.
